

WASP Project Course 2021

Daniel Axehill, examiner

daniel.axehill@liu.se

1

Schedule for today

- Course introduction
- Project presentations (videos) and questions
- Group discussions and possibilities to ask more questions about the projects in break-out rooms

2

Course goals

- On completion of the course, the student should be able to
 - develop a working prototype solving a relevant and technically challenging problem in the area of autonomous systems and software.
 - collaborate in a group in a project related to autonomous systems and software where interaction between several individuals with different competences is required.
 - collaborate with Swedish industry in the area of autonomous systems and software.
 - describe and, if applicable, use the possibilities available in the WASP research arenas, or similar industrial demonstrator setting.

3

Course organization

- 6 hp, to be carried out during fall 2021
- 12 independent projects
 - 5-7 WASP Ph.D. students.
 - Self-driving teams with large responsibility.
 - Each project has one *industrial* supervisor and one *academic* supervisor.
 - The projects are either connected to the existing WASP research arenas, or similar external industrial demonstrator.
 - After you have been assigned projects, there will be a possibility to iterate the contents to some extent, to align it with your background and research interests.
- Supervisors' responsibility
 - **Industrial supervisor:** ensures industrial relevance and scope. Provides necessary industrial resources.
 - **Academic supervisor:** ensures scientific relevance and quality, and monitors the fulfillment of the course goals.

4

Examination

Course requirements:

- Plan, carry out and follow up the project in an active manner contributing to its completion.
- Record two videos demonstrating and explaining the work
 - One short video (3-5 min) with a demonstration of the capabilities of the system.
 - One longer video (5-15 min) that also explains how the system works.
- A short technical report, preferably in the form of a scientific paper, describing the problem to be considered, the technical solution, an evaluation of the solution, and a discussion of the results.
- Give a presentation, preferably including a demonstration, at the Winter Conference 2022 (the exact presentation form is to be decided).

Examination, cont'd

- Official examiner: Daniel Axehill
- The academic supervisor of each project evaluates the project and therefore acts as the actual examiner of the project.

Course time plan

- Course introduction: **today**
- Select projects using the wish list: **at latest June 21**
- Decisions on which students that are assigned to which groups are communicated: **before Midsummer**
- Meeting with industrial & academic supervisors to decide scope etc.: **As soon as possible after the groups have been assigned**
- Official project start: **End of August** (course runs entire fall 2021)
- There are no planned course-wide meetings during the course
- Project deadline: **December 13 (approved by supervisors)**
- Project presentations: **WASP Winter Conference 2022**

Practical questions

- Travel costs, including hotels, for Ph.D. students are covered by their travel allowance.
- If there arise course-related issues you would like to discuss, there are problems that you need help with from the outside of the project, etc., **never hesitate to contact me!**

Wish list for preferred projects

- A link to a “wish list” has been mailed to you. Please submit your choice at latest June 21.
- You will have to give **four different prioritized alternatives** of which projects you prefer
 - We will make our best to make everyone happy!
- Leave information about if a group has started to form involving certain persons around a project.
- Leave information about special connections and/or competences related to specific projects.
- Project information can be found on the course homepage <https://internal.wasp-sweden.org/as-project-course-6hp/>

Projects 2021

- Composable Software Tools for the Working Programmer (P1)
- The efficient podcast listener: Enhancing the Spotify podcast dataset using both audio and text (P2)
- Semantic Weed Detection for Automated Agriculture (P3)
- Federated Learning for Safety Assurance of ADSs (P4)
- Safe shared situational awareness and decision-making for automated vehicles using intelligent intersections (P6)
- Vision-Based Deep Reinforcement Learning for Robot Navigation (P7)
- Software Technology for Reliable Autonomous Systems (P9)
- Data driven decision support with multi-characteristic analysis for location scouting (P11)
- Analytics and data visualization for large traffic scenario (P12)
- Docking and planning for unmanned boats (P13)
- Secure & Privacy-Preserving Participatory Sensing of Wireless Interference (P16)
- Vision-based Manipulation and Mobility (P18)

Schedule for today

- Course introduction
- Project presentations (videos) and questions
- Group discussions and possibilities to ask more questions about the projects in break-out rooms

P13: Docking and planning for unmanned boats

13

P1: Composable Software Tools for the Working Programmer

14

WASP Project Course 2021, Project #1
Composable Software Tools for the Working Programmer

Patrik Åberg, Ericsson
Christoph Reichenbach, LU
WARA for Software

WASP | WALLENBERG AI
AUTONOMOUS SYSTEMS
AND SOFTWARE PROGRAM

15

P2: The efficient podcast listener: Enhancing the Spotify podcast dataset using both audio and text

WASP | WALLENBERG AI
AUTONOMOUS SYSTEMS
AND SOFTWARE PROGRAM

16

17

P3: Semantic Weed Detection for Automated Agriculture

18

19

P4: Federated Learning for Safety Assurance of ADSs

20

21

P6: Safe shared situational awareness and decision-making for automated vehicles using intelligent intersections

The bottom of the slide features a dark teal horizontal bar. On the right side of this bar is the "WASP" logo in white, with the text "WALLENBERG AI AUTONOMOUS SYSTEMS AND SOFTWARE PROGRAM" in smaller white capital letters to its right.

22

23

P7: Vision-Based Deep Reinforcement Learning for Robot Navigation

24

Vision-based deep reinforcement learning for robot navigation

WASP project course description

Presentation by Arvi Jonnarth [arvi.jonnarth@liu.se]

25

P9: Software Technology for Reliable Autonomous Systems

26

27

P11: Data driven decision support with multi-characteristic analysis for location scouting

The slide features a white background with a thin black border. The title "P11: Data driven decision support with multi-characteristic analysis for location scouting" is centered in a dark grey font. At the bottom, there is a dark teal horizontal bar containing the WASP logo and its full name: "WASP | WALLENBERG AI, AUTONOMOUS SYSTEMS AND SOFTWARE PROGRAM".

28

WASP Project Course 2021

Data driven decision support with multi-characteristic analysis for location scouting

29

P12: Analytics and data visualization for large traffic scenario

30

Analytics and data visualization for large traffic scenario

WASP Project Course 2021

31

P16: Secure & Privacy-Preserving Participatory Sensing of Wireless Interference

32

Secure & Privacy-Preserving Participatory Sensing of Wireless Interference

WASP WARA Course Project #16

June 17, 2021

Panos Papadimitratos (papadim@kth.se)

Networked Systems Security Lab, KTH

www.eecs.kth.se/nss

1

33

P18: Vision-based Manipulation and Mobility

34

And now

35

Project selection summary

- Course homepage: <https://internal.wasp-sweden.org/as-project-course-6hp/>
 - Project descriptions
 - Projects videos
- Please submit your wish list in the form at latest June 21
- Contact me if anything is unclear!

36

Schedule for today

- Course introduction
- Project presentations and questions
- Group discussions and possibilities to ask more questions about the projects in break-out rooms
 - The Zoom meeting and break-out rooms will be open until 12.00, you are free to leave when you are done!
- Thank you for today!
